

Red Condor's Vx Technology™

Available on all MAG-Series Appliances

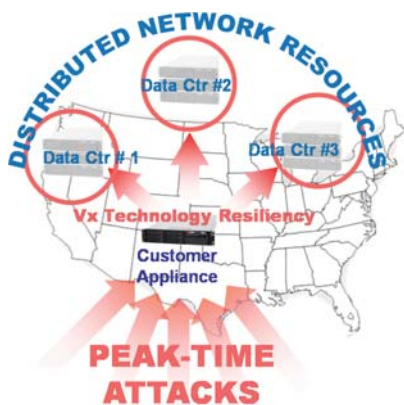

Get Built-In Resiliency with Vx Technology™

Red Condor's Vx Technology is the industry's first email security that integrates a local network appliance with hosted service. By combining the spam-filtering capability of Red Condor's Message Assurance Gateway (MAG) network appliances with the company's nationwide network of data centers, resources are always available to prevent spam attacks from overwhelming individual servers. With more than 90 percent of all email now consisting of unwanted and malicious messages,

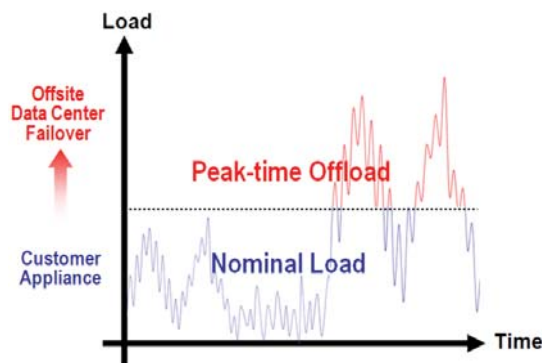

this traffic is placing an enormous and unplanned strain on customers' CPU resources and hard drive space. Red Condor is able to offload that pressure with network load sharing.

In addition to automatic, on-demand load sharing, Vx Technology also allows the customer's local network appliance to completely and automatically fail-over to Red Condor's hosted service should it go down entirely because of overwhelming attacks, power failure or other network issues.

Performance you can count on

Because of the extraordinary computing capacity needed to scan email traffic during malicious email attacks, the ability to offload email filtering to Red Condor's hosted service ensures the continued delivery of legitimate email. In the past, the only way network owners could address this issue was by purchasing multiple network appliances and having that hardware "sit and wait" for an emergency. Because of Vx Technology, Red Condor MAG appliance owners don't need to waste budget on unused hardware.

Vx Technology is now an available upgrade feature for inbound filtering on all Red Condor MAG appliances. MAG appliances come with Red Condor's proprietary multi-layer spam filtering technology, which eliminates fraudulent and predatory email based on absolute criteria that results in decisive action. The filters, continuously managed and updated by Red Condor, are created from real-time knowledge

Red Condor's Vx Technology gives you:

- Integration of your email appliance with a Virtual Back-up
- Built In Load Sharing
- Email Continuity: Proactive protection of business communication
- Failover Redundancy without the cost of a second box
- Access to an expert team of Email Security specialists

Save up to 75% on your email security with Vx Technology!

gathered from the company's worldwide sensor network. In addition, multiple signature-based anti-virus engines are used with Red Condor zero-hour virus defense to create protection that is both quick to respond and provides in depth defense.

Vx Technology – Beyond what's been available before

Typically, for anti-spam network appliances to have full redundancy, multiple hardware units need to be deployed to the local end user location. Many network appliances also require the purchase of load balancers to maintain the email stream during overwhelming attack. With Red Condor's Vx Technology, only one network appliance is required and no load balancer is needed. All Red Condor solutions are fully managed and proactively monitored, so the end user does not need to manage or facilitate any changes themselves. Vx Technology comes into play automatically, if and when it is needed and ensures the continued performance of your email network.

Red Condor's Vx Technology is a unique feature in the crowded email security space. It provides significant cost-savings to end users, and allows them to spend less time supporting email security. Because the solution is fully managed, the end user does not have to spend time in training or continuously updating filters or databases. **Learn more about how Vx Technology can help your organization by calling 1-888-9NO-SPAM or emailing us at info@redcondor.com!**

Here's what's being said about Vx:

"Red Condor's MAG device does what Red Condor said it would, and is **simply the best spam filter** I have evaluated."

John Bodden, Systems Administrator
Charleston Southern University
A satisfied EDU customer

"We're confident that if our appliance fails or goes off-line for some reason, all of our client accounts that are hosted on the appliance will be **seamlessly protected** through the re-direct to Red Condor's Hosted Service. We can provide **peace of mind**, through the use of VX Technology."

Michael B. Appollo, Chief Technology Officer
Network Solutions & Training
An authorized Red Condor reseller

"VX Technology **truly offers ROI** compared to all other anti-spam solutions in the marketplace."

John Pearson, President
IP Networks, Inc.
An authorized Red Condor reseller

"Red Condor's Vx Technology has allowed us to eliminate 12 email servers. Any time you can remove that many servers, **you save a significant amount of time and money.**"

Nate Bennett, Systems Administrator
NetNitco
A satisfied ISP customer
